More than 71.3 million Americans have one or more types of Cardiovascular Disease, according to the American Heart Association. More than 13.2 million Americans have Coronary Heart Disease and to many people in this group, the first sign of heart disease may be Sudden Cardiac Arrest or a Heart Attack.

Many people think, "it won't happen to me." Exercising, eating right, having yearly physical examinations, and watching your weight all help prevent heart disease, but they may not be enough. Many people have a history of heart disease in their family. There are other risk factors for heart disease including obesity and smoking. **Heart Disease - Detection** DVD gives you the tools you need to talk with your doctor about the many test available to detect heart disease including a calcium score, nuclear stress tests, blood tests, EKG, and other diagnostic tools.

No one is immune from **Heart Disease**. Medical experts stress the importance of a dialogue between a patient and their physician, and **Heart Disease - Detection** DVD will inform you on what diagnostic tests are available to discuss with your health care provider.

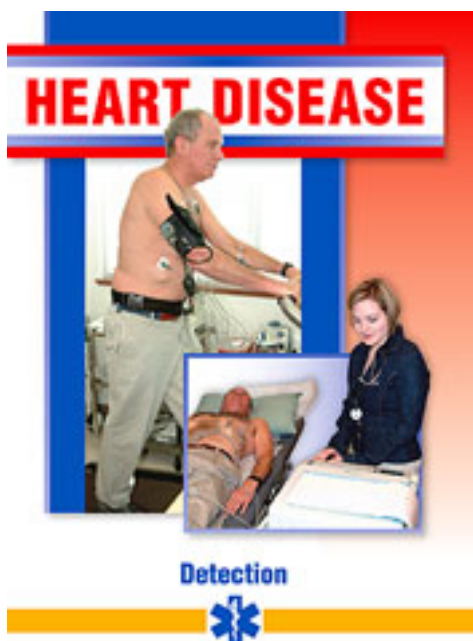

Heart Disease - Detection DVD will inform who and at what age people should be tested for Heart Disease. Interventional cardiologist Dr. Nelson Trujillo and other healthcare professionals explain tests ranging from blood tests, to calcium scoring for people with and without risk factors for Heart Disease. Many of those interviewed lead healthy, active lives with no risk factors until an unexpected heart attack occurred with no warning signs.

Often, doctors have very little time to talk with their patients. Knowing what test is available to detect heart disease will help you ask your healthcare professional the right questions for your unique medical history. The award-winning **Heart Disease - Detection DVD** shows actual patients being tested for calcium scores, noninvasive angiography, echocardiogram, and nuclear stress testing. Several members of the production crew had the diagnostic tests outlined **Heart Disease - Detection DVD** and found, to their surprise, they had heart disease. Often, many people do not have any signs or symptoms of heart disease and their first warning sign is having a heart attack and sometimes the heart attack can be fatal.

Heart disease can be detected and treated before a heart attack occurs. Often treatment may be as simple as taking one aspirin a day or a Statin drug once a day. If you or anyone in your family has heart disease **Heart Disease - Detection DVD** could save your life. Interventional cardiologist Dr. Nelson Trujillo and other healthcare professionals explained in clear, easy to understand language how heart disease can be detected. Heart disease is not just a disease of old age; many young healthy people have had heart attacks. Don't just say "it won't happen to me". Heart disease can occur in any one. Don't be a statistic! **Heart Disease - Detection DVD** is currently being used by hospitals, doctors, schools, libraries, emergency services, as well as individuals to help raise the awareness of heart disease.

Every person appearing in the program had their life saved or saved a life.
